SUMMARY

Developer with 5 years of experience in diverse domains, including Aviation, Mobility Booking, Compliance and Healthcare Recruitment. Proficient in JavaScript and TypeScript ecosystems, I have hands-on experience working across the full stack from frontend frameworks, backend services, databases, and cloud infrastructure. I regularly collaborate with clients from Singapore and Japan, using English as my primary language of communication. My versatility and technical expertise enable me to contribute effectively to various aspects of modern application development.

Education

University of Engineering and Technology, Vietnam National University Hanoi, Vietnam
Bachelor Degree in Computer Science *Aug. 2018 – Jun 2022*

Technical Skills

Languages: Javascript/Typescript, Python, HTML/CSS
Frontend Frameworks/Libraries: ReactJS, Redux, Material-UI, Ant Design, Bryntum
Backend Frameworks/Libraries: NestJS, ExpressJS, Bcrypt, Swagger
Databases/Messaging : MySQL, MongoDB, Redis, Kafka
Cloud/DevOps : AWS (Lambda, S3, EC2, CodePipeline), Docker, CI/CD, GitHub Actions, Bitbucket Webhooks
Security Techniques: JWT, Encryption, Hashing, Cors, XSS Prevention
Developer Tools: Git, Docker, VS Code, PyCharm, Prettier

Experiences

Software Engineer Jul 2025 – Jul 2026
Rikkeisoft *Hanoi, Vietnam*

- Contributed to projects in the Compliance domains
- Collaborated regularly with BA for requirement clarification.
- Worked closely with QA engineers to test and validate changes before release.
- Researched the codebase and project documentation to deepen domain knowledge and contribute more effectively to the project.

Software Engineer Jul 2022 – Jul 2025
FPT Software *Hanoi, Vietnam*

- Contributed to projects in the Aviation and Taxi Booking service domains
- Collaborated regularly with Singaporean clients, using English as the primary communication language.
- Participated in multiple phases of the software development lifecycle.
- Delivering production-ready features on time and monitoring for post-release bugs and performance issues.

Software Engineer Jul. 2021 – Jun. 2022
Vietnam Talentbase *Remote, Ho Chi Minh*

- Contributed to projects in the Healthcare Recruitment services domain.
- Communicated with Japanese clients via English-translated documents and chat platforms for requirements

Software Engineer Mar 2021 – Jul 2021
MISA Joint Stock Company *Hanoi, Vietnam*

- Contributed to projects in the Accounting product domain.
- Receive training on best practices and development optimizations for efficient coding
- Rewrite accounting product sub-features in frontend and backend to gain hands-on experience

Projects

CaseIQ - Rikkeisoft Sep 2025 – Present

In this project, i worked as a Full-Stack Engineer on a compliance management web application, offering solutions such as Approval & Disclosure, Third-party management, Compliance Monitoring. My focus was on managing multi-tenant compliance workflows, developing scripts to validate and ensure workflow reliability, collaborating closely with Business Analysts and QA engineers to deliver solutions that aligned with client requirements. I also conducted technical research to continuously improve the application and contribute to the overall project.

- Developed and maintained compliance workflows for multi-tenant applications.
- Implemented approval and disclosure workflows based on business rules, risk levels, organizational structures, and tenant-specific requirements.
- Collaborated with Business Analysts, QA engineers to make sure the client requirements are aligned accurately.
- Researched and evaluated technical approaches to improve application and troubleshoot issues.

Technologies: Typescript, ExpressJS, ReactJS, PostgreSQL, Docker, Github Actions, AWS, Multi-tenant Architecture

Zig Next - FPT Software Jul 2023 – Sep 2025

In the Common Squad in a leading Singaporean mobility booking application, I specialized in backend development for a platform offering various land transport options (buses, taxis). My primary focus was on critical shared components, including passenger management, secure OAuth flows, and the administrative workbench feature.

- Decouple legacy monolithic services into microservices architecture.
- Integrate Kafka and AWS Cloud Services along with the backend solutions
- Implement a distributed tracing in application server for monitoring and auditing requests.
- Develop ACL feature for administrator access on the backend.
- Contribute to passwordless authentication flows for mobile service using OAuth/OneLogin.
- Migrate user from legacy database into current services such as MongoDB, OneLogin.
- Lead a small team of 4 members, review code and communicate between squads for tasks and issues.

Technologies: Typescript, NestJS, MongoDB, Kafka, OneLogin, Docker, Bitbucket, AWS, Microservices

OCCSRP - FPT Software Jul 2022 – Jun 2023

Working as a frontend developer for a Singapore-based aviation project that delivers comprehensive solutions for flight operations control, including: flight scheduling and management, passenger coordination during flight delays and cancellations, flight planning optimization tools.

- Enhanced load performance on data-intensive pages using Thread Workers and various UI optimization techniques
- Collaborated effectively with the library team to address and resolve package-related issues.
- Integrated backend APIs, write UI components, pages and reusable UI hooks.

Technologies: ReactJS, Javascript, Redux, WebSocket, Worker Threads, Bryntum, Jest.

Monsuke Jitak - Talentbase Vietnam Jul 2021 – Jun 2022

Working on the workbench side of a Japanese nursing care part-time job recruitment app, the platform included a mobile app for workers and a workbench for recruiters to manage job applications, verify check-in/check-out times, and post job searchs.

- Integrated backend APIs, write UI components, papes and reusable UI hooks.
- Receive requirements through documents with UI designs.
- Fix bugs, write unit tests.

Technologies: Javascript, AngularJS, ExpressJS, MongoDB, CircleCI, AWS EC2.
